Each COVID-19 vaccine dose increases your protection against severe illness.

Each time you get a COVID-19 vaccine, it boosts your immunity and increases your protection.

Over time, your immunity will go down. Boosters bring your protection back up again.

Everyone’s health is unique and some may need more doses to reach a high level of protection (like Max’s Grandma).

The greater your immunity, the more your body is able to fight COVID-19. This means you are less likely to have a very serious case or need to go to the hospital.
